

## CLEANING RECCOMENDATIONS FOR C-TECH-I STAINLESS STEEL SINKS

Congratulations on the purchase of you new C-TECH-I sink, we hope you and your family enjoy your new kitchen and consider us for any future project you may have in your kitchen and bath.

Your new sink is made of premium 18/10 stainless steel and has a nominal thickness of 18 gauge. The 18/10 refers to the proportion of chromium to nickel in the stainless steel alloy, The presence of chromium enables the steel to form an invisible layer of oxide that protects it against corrosion and the addition of nickel to the alloy increases its corrosion resistance while adding a bright polished appearance, hardness, and exceptional resistance to all temperatures. The extra thickness of the steel in our sinks will resist normal abuse; however we do recommend the use of our strainer-grids to protect against accidental damage.

Daily cleaning practices:

We suggest you clean the sinks as you would a stainless steel pot, use a mild detergent with a sponge, rinse and dry off. From time to time you may also polish it as to restore it to its original beauty and shine using "Never-Dull" (purchased at any auto supply shop) or any polishing cream for stainless steel of your choice.

Things to avoid:

1. Do not use harsh chemicals inside the sink; if you would not put it on your hands don't put it in the sink. Bleaches, acids, thinners, etc. Be advised that some foods contain acids, such as lemons. If you d rinse off and dry clean ASAP.
2. Never lay rusted objects or objects prone to rusting inside the sink, although the sink itself is incapable of rusting it will stain if a rusted foreign object is laid in it.

Troubleshooting:

Q: I scratched or dented my sink, what do I do?

A: There is no way to avoid minor dents and scratched, in time they will blend in. If you are extremely bothered by them try using a metal polish, we have had success with a brand called "Top Brite", it will work on minor scratches.

Q: I stained my sink by mistake, what do I do?

A: Rinse off the sink and clean immediately, if it's too late read on. We have been using "Never-Dull" to clean and polish our sinks; it will remove most stains, even rust.

If you have any further questions please contact your dealer.

Abide by all local codes and regulations, read manufactures instructions for all products listed above and use and perform the above recommendations at your own risk. Refer to OSHA for all safety and handling guidelines.
